

CLIENT: YOMA BANK

Challenge

Yoma Bank is one of Myanmar's largest private banks, with over 3,000+ employees and 80 branches across the country. Over the past few years, Yoma Bank has made significant investments in strategic priorities namely people, corporate governance, and technology.

One of these strategic priorities is to develop an enterprise data warehouse to support Business Analytics and Financial Reporting and then to extend this to include Advanced Analytical capabilities such as Customer 360 and Next Best Offer analysis. Yoma Bank wanted as much as possible for their local team to develop this solution but also recognised that there was a gap in their knowledge and experience to deliver this initiative.

Yoma Bank went to market for an experienced Data Analytics partner and chose to partner with Taysols after considering several consultancies around the Asia Pacific region.

Approach

As part of their commitment to invest in its people, Yoma Bank asked Taysols to assist and train the local Yoma Bank resources to deliver the solutions according to industry best practice and ensure that the team worked towards becoming self-sufficient for the subsequent phases.

Taysols' years of experience in delivering these solutions for our clients has shown that the best way to deliver Yoma Bank's desired outcomes is to have Taysols' personnel work alongside the members of the Yoma Bank team during the installation and configuration of the relevant Oracle technologies.

Working closely and collaboratively with the Yoma Bank team allows for vital knowledge transfer to be delivered through hands-on workshops, solution-specific documentation and face to face consultations.

COMPANY DETAILS:

Yoma Bank Limited is one of Myanmar's largest commercial banks. It is the 4th-biggest bank in Myanmar. The bank is led by Canadian Hal Boshier and has 80 branches across the country.

EMPLOYEES:

3,000+

INDUSTRY:

Private Bank

PROJECT TIMELINE:

2 months

TECHNOLOGIES:

Advanced Analytics

SERVICES:

Consulting

KEY BENEFITS:

Integration of Azure Active Directory to provide a seamless login experience and flow on data security controls.

Most importantly the project was delivered on time and on budget and has set the local Yoma Bank team for future success as they expand their analytics capabilities.

CLIENT: YOMA BANK**Solution**

Taysols began with a review of the solution design and assisted the local team with the configuration and integration of:

- ODI 12c
- Oracle DB 18c
- OBIEE 12c
- Azure Active Directory / Active Directory

Taysols then provided assistance and guidance around the integration of data from source systems to a target data warehouse and the creation of data marts to support multiple business functions. With the data integration and business-specific data models in place, Taysols then assisted the local team with the delivery of reports, dashboards, and advance visualisation capabilities that OBIEE delivers.

Underpinning all of this was the security of the information within Yoma Bank and so the Taysols team worked closely to integrate their security requirements into the solution through the integration of Azure Active Directory to provide a seamless login experience and flow on data security controls. Most importantly the project was delivered on time and on budget and has set the local Yoma Bank team for future success as they expand their analytics capabilities.
