PRIVATE CLOUD SERVICES

Business Analytics Cloud Experts

Taysols is Australia's leading consulting, cloud and support partner for Business Analytics & Big Data solutions.

Our proven cloud services include Platform as a Service (PaaS), Software as a Service (SaaS) and Analytics as a Service (AaaS) models - all optimised for Business Analytics & Big Data solutions.

We host the full suite of OneStream's, Oracle's, Microsoft's and MicroStrategy's performance management, business intelligence and data discovery software plus a range of technologies for Big Data, warehousing and data integration.

We get you up and running quickly, then look after your deployment in Australian Tier III data centres with strict service level agreement sin place.

We provide all hardware, operating system and database licences, secure access and world class disaster recovery regimes.

In summary, our cloud services allow you to focus on the actionable insights your Business Analytics & Big Data solution provides, while we take care of the rest. Our cloud services are:

PRIVATE CLOUD SERVICES

Our Key Differentiators

For Taysols, hosting Business Analytics & Big Data applications is not "just another system", it's what we do. We understand that they are different from straight databases, or an ERP system and the people that use them just want them to work without having to know "all the back end stuff".

We give them specialised attention – from secure access, through to how they operate with hardware and operating systems including DR and we do it without any fuss for the end users. We are so confident with our solution that we back up our credentials with strict SLAs.

Put simply, Taysols is your one stop shop for Big Data & Business Analytics. Safe, Proven, Reliable and Cost Effective.

TAYSOLS' SPECIAL APPROACH

We are happy to offer you our skills and services, even if you are hosting your technologies on-premise or with any other provider.

Our team is happy to work together with you to help you make your environments as good and productive as possible.

Just give us a call to discuss your needs and issues.

Cloud Services in Comparison
